A contrarian argues that modern physicists' obsession with beauty has given us wonderful math but bad science.

Whether pondering black holes or predicting discoveries at CERN, physicists believe the best theories are beautiful, natural, and elegant, and this standard separates popular theories from disposable ones. This is why, Sabine Hossenfelder argues, we have not seen a major breakthrough in the foundations of physics for more than four decades. The belief in beauty has become so dogmatic that it now conflicts with scientific objectivity: observation has been unable to confirm mindboggling theories, like supersymmetry or grand unification, invented by physicists based on aesthetic criteria. Worse, these "too good to not be true" theories are actually untestable and they have left the field in a cul-de-sac. To escape, physicists must rethink their methods. Only by embracing reality as it is can science discover the truth.

Manny said: Sabine Hossenfelder is a theoretical physicist, and she's pretty mad about the way her subject h. Lost in Math | Mathematical Association of America The usage of "Math" in the title is more like the everyday usage as meaning "calculation", making a claim that theorists have gotten lost in endless calculations in ever more complex models, unable to find a route towards genuinely new ideas that could lead to connection to experiment and real progress.

Lost in Math: How Beauty Leads Physics Astray by Sabine ... Lost in Math chronicles her quest--through interviews and conversations--to set her own course for exploration." Chris Quigg, Distinguished Scientist Emeritus, Fermi National Accelerator Laboratory. Lost in Math | Books, Et Al. - blogs.sciencemag.org Lost in Math paints a very bleak picture of the state of affairs, with Sabine Hossenfelder serving as the iconoclast. Our theoretical guiding principles, she insists, are more aesthetic than scientific.
